

INTRODUCTION

De IJssel Coatings BV developed a machine to accurately dispense both components of Variopox Filler, Variopox LG Filler, Variopox Finishing Filler or Variobond. Below a brief description is given of this machine.

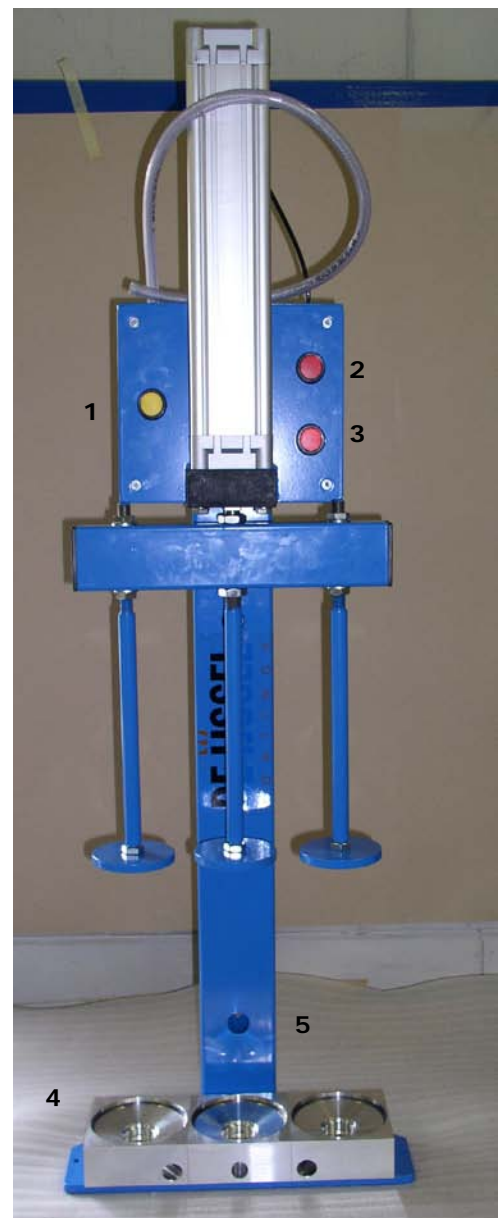

COMPRESSED AIR

The dispensing machine operates on compressed air. A simple compressor is sufficient to benefit of the advantages of automatic dispensing of the components. Simple compressors are available at low costs at most hardware stores. When you have your own system of compressed air available, a simple connector will be sufficient to connect the machine to your system.

INSTRUCTIONS

- For safe use, the dispensing machine will only start when two buttons are pressed simultaneously. The yellow safety switch (1) must be activated before one of the red buttons will move the piston up (2) or down (3). When one of the buttons is released, the machine will stop immediately.
- The machine may be attached to a table (4). Alternatively, the column of the machine may be attached to the wall (5).

PRODUCTS

- All versions of Variopox Filler and Variobond are available in a special packaging suitable for this dispensing machine. Each set consists of three cans: two cans base component and one can hardener. The cans can easily attached to the machine by removing the screw cap and screwing the cans to the machine (6). The mixing ratio is always correct, weighing of the components is not required and errors in weighing are eliminated.
- With a putty knife the three openings (7) can be kept clean. After use these can be closed using a piece of paper

PRICE INFORMATION

De IJssel Coatings wants to offer each professional the benefit of this machine. The machine is made available at a price of € 1,750,00, excluding VAT with a special rebate offer. When in 2 years after purchase of the machine more than 750 litre of filler or adhesive is used, we will refund € 750,00!
